

# PATCH

## GOT CONCRETE? GET PATCH.

If you run harsh or industrial operations, you will need to repair your facility. Even the most durable substances, like concrete, eventually fall victim to the wear-and-tear of industrial business conditions.

## IS IT WORTH THE RISK?

Holes, cracks, and damaged expansion joints can quickly and easily become bigger problems. If not addressed, they can create employee safety hazards, Workmans' Comp claims, compromise structural integrity, and increase the risk for equipment and product damage.

## SOLUTIONS FOR ALL SITUATIONS

Tri-Chem has developed its own line of proprietary patching systems, formulated with only the highest quality raw materials. Designed to withstand the harshest environments, these solutions are pre-measured and easy-to-use so anyone in your facility can fix a problem quickly and effortlessly.

### **Tri-Chem's patching solutions can be applied anywhere, including:**

- △ Vertical surfaces
- △ Tanks
- △ Horizontal surfaces
- △ Coal chutes
- △ For structural integrity
- △ To anchor heavy machinery
- △ And more

Contact our experienced team of patching experts to learn how the right products can reduce repairs and save you time and money.

# PATCH

## EXTREME PATCH

**Extreme Patch** is a pigmented, heavy-duty, high-compression strength patch for damp plant floors.

## Z-PATCH

**Z-Patch** is a pre-measured patch that repairs damaged floors, eliminates cracks and damaged expansion joints, and anchors machinery.

## FLEXIBLE JOINT SEALER FAST SET

**Flexible Joint Fast Set** is a 100% solids polymer dual cartridge system designed to repair cracks and damaged expansion joints.

## 663 RAPID REPAIR PASTE

**663** is a fast-track repair for chips, defects, and small voids in vertical and overhead concrete surfaces.

## PERMA-FIL

**Perma-Fil** is a high-strength floor patch that withstands heavy traffic and bonds to concrete, steel, and wood.

## PERMA-FIL DAMP PATCH

**Perma-Fil Damp Patch** is high-strength floor patch that withstands heavy traffic and cures on damp and wet concrete.

## QUICK PATCH

**Quick Patch** is a fast-curing leveling compound used to fill large cracks in severely damaged concrete floors.

## HEATCRETE 3100

**Heatcrete** is for repairing concrete on/around furnaces, cast houses, iron cupolas, hot metal spillage areas.

## RECRETE

**Recrete** is a fast-setting mortar mix resurfacing and patching material for concrete, wood, and metal surfaces.

## SPECIAL PATCH

**Special Patch** is a 1-hour concrete mender for rebonding cracked concrete restoring structural integrity. Available in a cartridge.

## THREE PATCH

**Three Patch** is a blend of resin, hardener, and aggregate for damp concrete floors from chemical spillage.

## QUICK FREEZER SEAL

**Quick Freezer Seal** is recommended for industrial repairing of concrete holes, cracks, and thresholds.
